

Priyamwada Pandey

Bloomington, IN • (930) 904-4910 • [Portfolio](#) • [LinkedIn](#) • [Email](#)

Product Designer with 3+ years designing for enterprise and early-stage products. I have designed from zero as one of the first two designers at a conversational AI B2B SaaS startup and owned interaction design for an AI assistant embedded inside Rocket Mortgage's client-facing dashboard. I focus on high-stakes workflows where information is scattered: decision-support interfaces, agent configuration and multi-step process design.

EXPERIENCE

Conversational AI Design Intern @ Rocket Mortgage

Detroit, MI • May 2025 – Aug 2025

- Redesigned the post-offer onboarding experience inside Rocket Assist from a text-based assistant into a personalized and context-driven system grounded in each client's actual loan stage and home details.
- Defined three new interaction patterns for Rocket Assist that were taken into roadmap discussions with the product lead as candidate features for the next development cycle.
- Led usability testing with 8 Rocket Mortgage clients against defined success criteria; 92% rated the redesigned experience as more helpful and trustworthy than the existing assistant.
- Scoped design features against technical dependencies across product, engineering and research, producing handoff artifacts that were roadmap-ready at the end of a 3-month engagement.

Product Designer @ Tars Technologies

Bengaluru, India • Mar 2022 – Jul 2024

- Joined as one of the first two designers at Tars, establishing the design system, component library and design-dev handoff process from scratch, which served as the foundation of subsequent product work.
- Owned research and interaction design for the Asimov dashboard, enabling 15+ enterprise teams to configure and manage AI workflows; achieved 41% product adoption within the first quarter post-launch.
- Designed and shipped Chatbot Debug Mode for internal team, surfacing conversation flow errors and system issues in one place, cutting manual troubleshooting time by 70% across large-scale deployments.

Product Design Intern @ Tars Technologies

Bengaluru, India • Sep 2021 – Feb 2022

- Built Tars' analytics feature from scratch, giving ~85 active clients their first native view of chatbot performance across 10 visualization types. Adopted across the entire active client base.
- Redesigned chatbot customization into a WYSIWYG interface, moving advanced controls out of the codebase and into the product and eliminating technical dependency for every active account. .

SKILLS

- **Interaction Design:** User-Centered Design, Information Architecture, Design Systems, Responsive Design, Accessibility, Conversational UI, Agentic Interfaces, Agent Configuration Design, AI Assistant Design
 - **Tools:** Cursor, Claude Code, Figma
 - **Research & Validation:** Usability Testing, Qualitative Research, Interviews, Heuristic Evaluations, Competitive Analysis, A/B Testing
-

EDUCATION

MS Human-Computer Interaction @ Indiana University Bloomington

May 2026

Bachelor of Architecture @ Amity University

May 2019
